DASA & CIWG 2025 — College Predictor (Analytics + Recommendation Report)

This report summarizes the consolidated opening/closing ranks across rounds and describes the recommendation logic used in the accompanying predictor webpage.

Dataset coverage (from consolidated sheet)

Metric	Value
Total Unique Programs	324
DASA-CIWG Programs	215
DASA-Non CIWG Programs	109
Programs in Round 1 (CIWG)	215
Programs in Round 2 (CIWG)	46
Programs in Round 3 (CIWG)	18
Programs in Round 1 (Non CIWG)	109
Programs in Round 2 (Non CIWG)	20
Programs in Round 3 (Non CIWG)	19

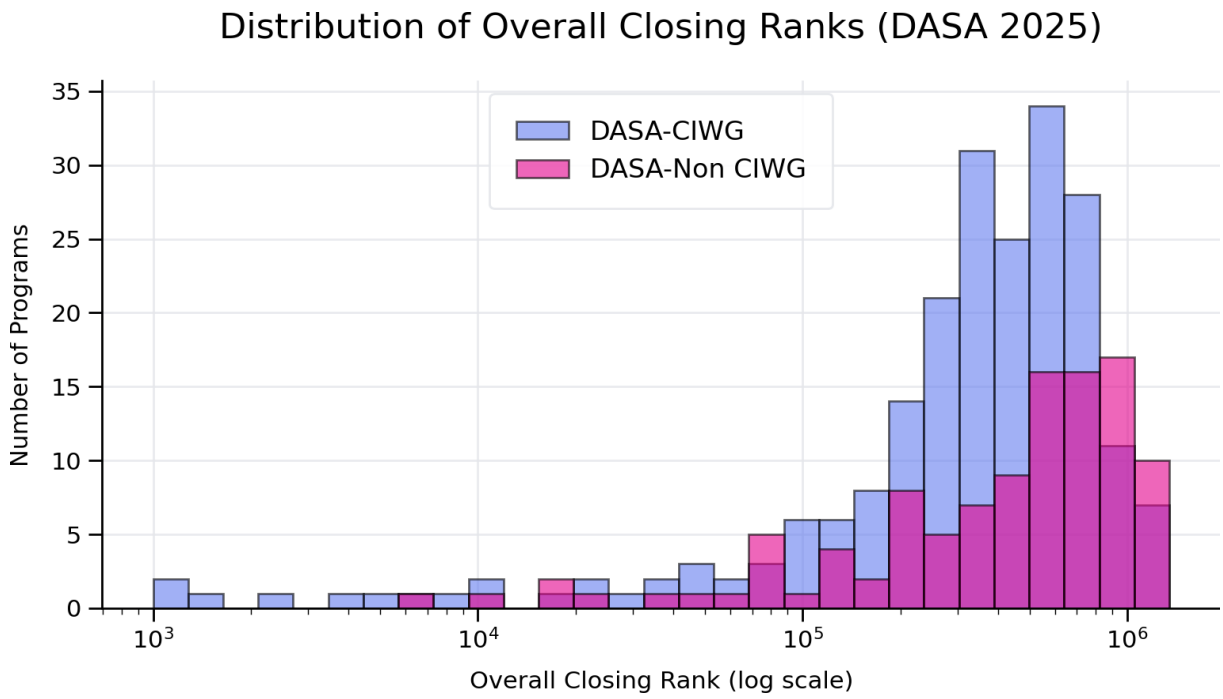
Key statistics

DASA-CIWG
Closing rank range: 1,071 to 1,270,913. Median closing rank: 376,662. 75th percentile: 586,995. Median spread (closing-opening): 52,390.

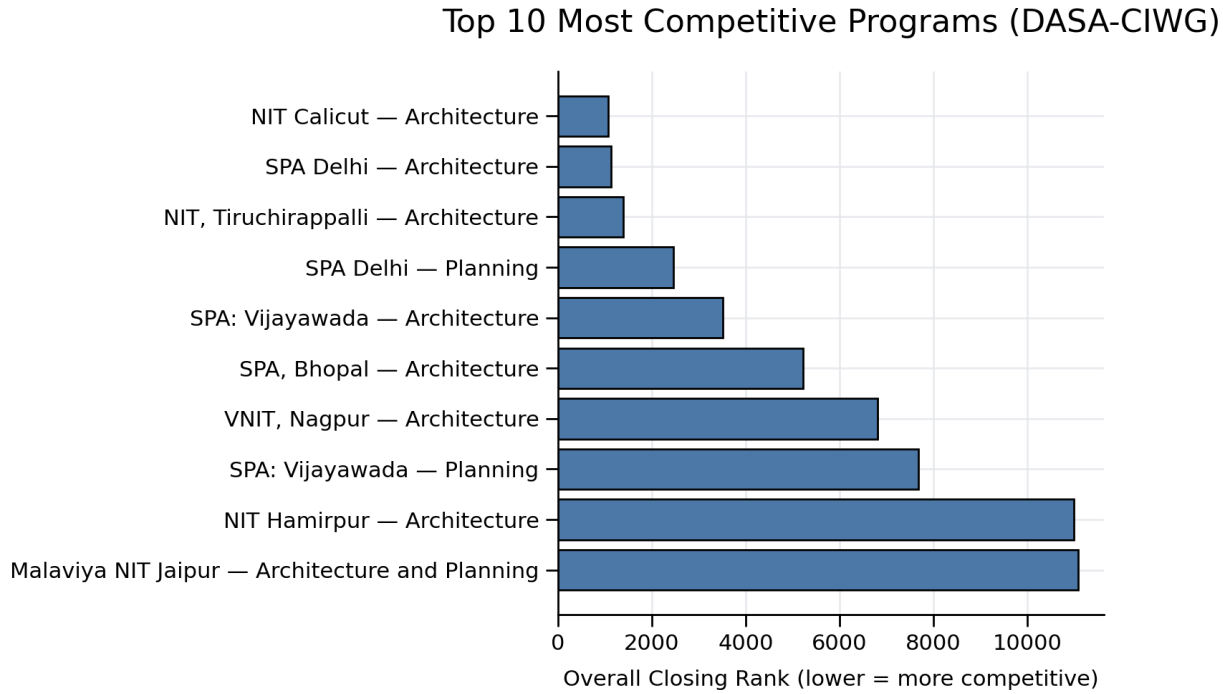
DASA-Non CIWG
Closing rank range: 6,016 to 1,347,319. Median closing rank: 533,851. 75th percentile: 828,008. Median spread (closing-opening): 98,913.

Visual analytics

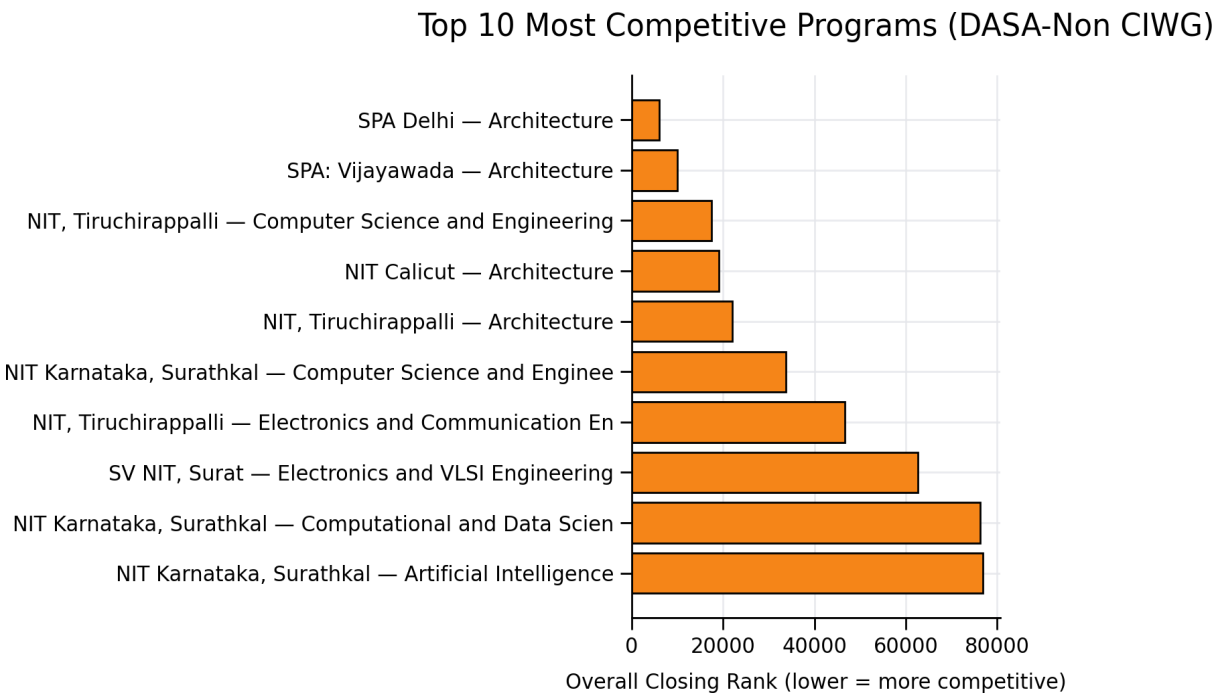
Distribution of overall closing ranks (log scale).



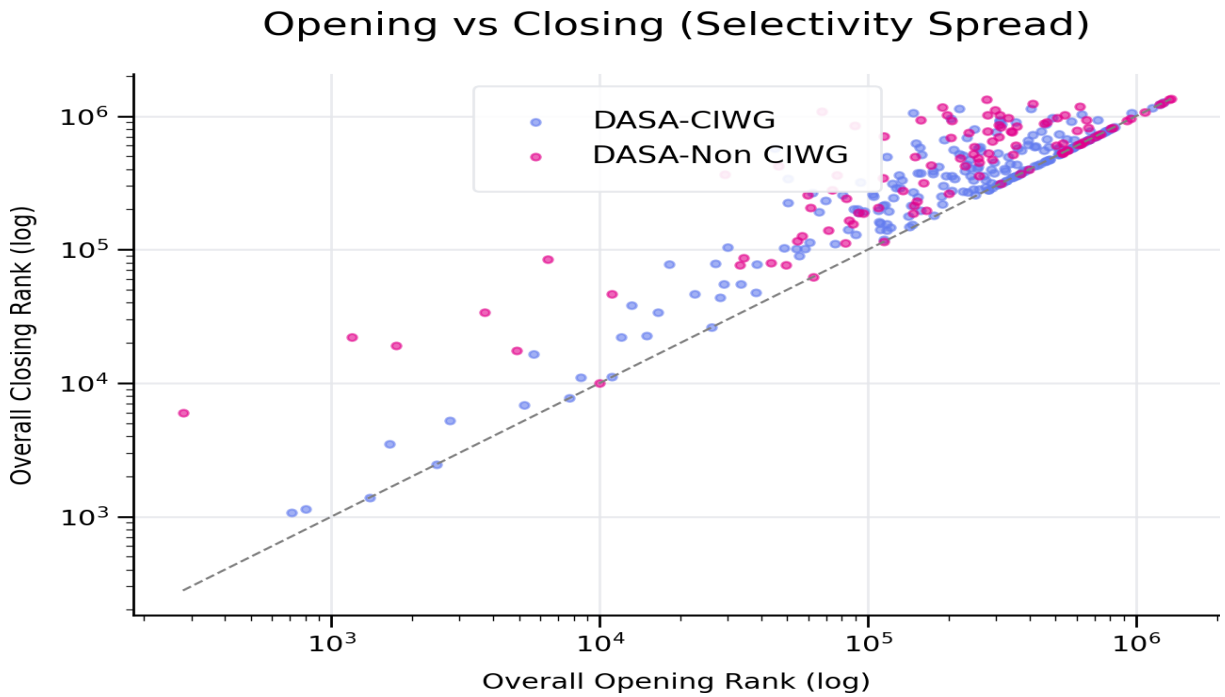
Top 10 most competitive programs in DASA-CIWG (lowest closing rank).



Top 10 most competitive programs in DASA-Non CIWG (lowest closing rank).



Opening vs Closing scatter (log-log). Points near the diagonal indicate narrower spreads.



Recommendation logic (used in webpage)

Inputs: candidate category (DASA-CIWG or DASA-Non CIWG), candidate rank, optional branch keyword.

Core idea: For each program, compare the candidate rank against the program's consolidated *Overall Opening* and *Overall Closing* ranks.

Bucket rules (heuristic): Safe: rank ≤ 0.80 × closing rank **Target**: 0.80 × closing rank < rank ≤ closing rank **Dream**: closing rank < rank ≤ 1.10 × closing rank (near-miss band) **Unlikely**: rank > 1.10 × closing rank **Fit Score (0–100):** higher when rank is comfortably inside the opening–closing window; lower when above closing rank.

Why this works: Opening rank approximates the strongest admitted profile; closing rank approximates the weakest admitted profile. Using consolidated values across rounds gives a quick, practical benchmark for choice list building.

How to use (recommended workflow)

Start with **Target** bucket to build your main choice list. Add 3–6 programs from **Safe** to reduce risk. Add a small number from **Dream** if you're comfortable with uncertainty. Use the branch keyword filter to keep the list aligned with your interests.
